Heavy snow	Sleet	Heavy Rain	Light snow showers	Partly cloudy (night)	Light snow showers (night)
Precipitation probability					
40%	70%	40%	30%	30%	30%

Forecast for Wednesday 21 Feb 2024

Weather: Dry but increasingly cloudy in the early hours. A band of cloud, with outbreaks of rain or summit snow, pushes northeast from just before dawn, with heavy precipitation at times. This clears away east by mid-afternoon with prolonged clear spells following, but a chance of a few showers feeding in from the west, falling as snow above 600-800m. Strong south or southeasterly winds turn west to southwesterly later, with gale force gusts at times, or even storm force gusts on the highest summits.

Chance of cloud-free hill tops above 800m: 70% before dawn, falling to less than 30%, rising again to 80% in the afternoon, the best chances in the east.

Low cloud and visibility: Good visibilities and cloud well above summits before dawn. Extensive low cloud down to 400m or so will arrive through the morning, accompanied by poor visibilities in rain or sleet. Possibly a few breaks to the lee of higher ground. This clears in the early afternoon, allowing for prolonged clear spells and bases above the summits, but cloud bases and visibilities falling rapidly in any snow showers in the west.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View

Low cloud through the morning will make conditions difficult with poor visibilities and patchy rain causing wet conditions underfoot. Gale force gusts at times, or even storm force gusts on the highest peaks, will give difficult or hazardous walking conditions and provide a significant wind chill.

Forecast for Thursday 22 Feb 2024

Weather: Showers or longer spells of rain or summit snow likely clearing east through the morning. Behind this further isolated snow showers arrive from the west, leaving clear and sunny spells in the east. Cold with blustery winds, but not as strong as on Wednesday.

Maximum wind: Southwesterlies with means 35-40mph falling to 20-25mph, gusts 45-50mph falling to 30-35mph.

Chance of cloud-free hill tops above 800m: 40% rising to 80%, the best of the chances in the east in the afternoon.

Low cloud and visibility: Broken cloud with bases down to 400-500m and poor visibilities in snow showers in the morning. Generally clearer with cloud bases above 1000m in the afternoon, but falling rapidly in any snow showers.

Temperature: **Glens:** Plus 2 to plus 4 Celsius.
At 800m: Minus 1 to minus 3 Celsius.
Freezing level: 300-500m.
